P525/1
CHEMISTRY
Paper 1   **PRIDE SECONDARY SCHOOL-MITYANA**
2 ¾ hours

END OF TERM II EXAMINATIONS-2022
Uganda Advanced Certificate of Education
S.5 CHEMISTRY
Paper 1
2 hours 45 minutes

INSTRUCTIONS TO STUDENTS:
Answer all questions in section A and six questions in section B
All questions must be answered in the spaces provided

The Periodic Table, with relative atomic masses, is supplied.

Mathematical tables(3 – figure tables) are adequate or non-programmable

scientificelectronic calculators may be used

Illustrate your answers with equations where applicable.

Where necessary, use the following:

   Molar gas constant R = 8.31 JK^{-1} mol^{-1}

   Molar volume of a gas at s.t.p is 22.4

   litres. Standard temperature = 273 K

   Standard pressure = 101325 N m^{-2}

SECTION A (46 MARKS)

1. a) Methylamine is a weak base
    i)   What is **weak base**? *(1 mark)*

....

....

    ii) Write the equation for the ionization of methylamine. *(1 mark)*

....

....

    iii) Write the expression for the ionization constant of methylamine. *(1 mark)*

....

....

    b) i) Calculate the hydrogen ion concentration in a 0.02M solution of methylamine. ($K_b = 4.4 \times 10^{-4}$; $K_w = 1 \times 10^{-14}$ at 25^oC). *(3 marks)*

....

....

....

....

....

    ii) Calculate the pH of the solution. *(1 mark)*

....

....

2. Name the reagent that you would use to distinguish between the following pairs of compounds. In each case state what you would observe when the reagent is treated with each member of the pair.

a) CH_3CH_2Cl and Chlorobenzene *(2 marks)*
   Reagent:

....

   Observations:

....

....

....

b) CH_3CH_2OH and CH_3OH *(2 marks)*
   Reagent:

....

   Observations:

....

....

....

c) CH_3CHO and CH_3CH_2CHO *(2 marks)*
   Reagent:

....

   Observations:

....

....

3.   Write the ionic equation for the reaction between sodium hydroxide and
      (a)   Silicon(IV) oxide   (1 ½ marks)

....

      (b)   Aluminum   (1 ½ marks)

....

      (c)   Beryllium oxide   (1 ½ marks)

....

4.   a)   i)   Define a '**complex ion**'.   (2 marks)

....

....

            ii)   Explain why transition metals form complexes.   (2 marks)

....

....

....

....

      (b)   Complete the following table about complexes of chromium and cobalt.
                                                                       (2 marks)

Complex	Oxidation state of metal ion	Co-ordination number
$[Cr(NH_3)_6]^{3+}$		
$[CO(NH_3)_4(H_2O)_2]Cl_2$		

5. State what you would observe and write an ionic equation for the reaction between aqueous copper(II) sulphate solution and:

    (a)   Excess concentrated hydrochloric acid   *(2 ½ marks)*

Observation

....

Equation

....

    (b)   Aqueous potassium iodide solution.   *(2 ½ marks)*

Observation

....

Equation

....

6. Excess magnesium was added to 100 cm^3 of 0.2 M copper(II) sulphate solution. The temperature rose by 16.9 °C.

    a)   Write an equation for the reaction.   *(1½ marks)*

....

    (b)   Calculate the enthalpy of the reaction. *(Density of the solution is 1.0 g/cm^3. Specific heat capacity of the solution is 4.2 J/g/°C).*
    (2½ marks)

....

....

....

....

....

7. a)   Define:
    i)   **Bond energy**.   *(02 marks)*

    ....

    ....

    ii) **Heat of formation**.   *(02 marks)*

    ....

    ....

8. a)   An alkyne X has molecular formula C_4H_6. Write the names and
         structural formulae of all possible isomers of X.   *(2 marks)*

    ....

    ....

(b)   **X** reacts with an ammoniacal solution of silver nitrate.
  i)   State what is observed.   *(½ mark)*

....

  ii)   Write the equation for the reaction that takes place.   *(1 mark)*

....

c)   Write equations to show how **X** can be synthesized from ethene.

                                                              (4 marks)

....

....

....

....

9.   Explain the law of mass action. Illustrate your answer

....
....
....
....
....
....
....
....
....
....
....

SECTION B: (54 MARKS)
Answer **six** *questions from this section.*
Additional questions answered will **not** *be marked.*

10. Write equations to show how the following compounds can be synthesized. Indicate the reagents and conditions.

    a) $(CH_3)_2C = NOH$ from propane – 2 – ol. *(2 marks)*

....

....

....

    b) $CH_3CH(OH)CH_3$ from $CH_3CH_2CH_2Cl$ (3 marks)

    ....

....

....

....

....

    c) $CH_3CH_2C \equiv CCH_2CH_2CH_3$ from But-l-ene. *(2 marks)*

....

....

....

    d) CH_3COCH_3 from $CH_3CHClCH_2Cl$ *(2 marks)*

....

....

11. (a) Write the formula and name of **one** ore of aluminium. *(1 mark)*

....

(b) In the extraction of aluminium, the ore is first digested with sodium hydroxide solution. Describe what happens and write equation(s) for the reaction (s) that take place. *(3 marks)*

....

....

....

....

....

(c) Name the steps that are carried out after digesting the ore with sodium hydroxide. *(3 marks)*

....

....

....

....

....

(c) Describe how pure aluminium is obtained from the purified ore. Write the equation for the reaction. *(2 marks)*

....

....

....

12. a) Define
        i)   **Electrolytic conductivity**.   *(1 mark)*

....

....

        ii)   **Molar conductivity**   *(1 mark)*

....

....

     (b) The electrolytic conductivity of a 0.1 M ethanoic acid at 20° C is
          1.96×10^{-2} Sm^{-1}. Its molar conductivity at infinite dilution is
          3.52×10^{-2} S m^2 mol^{-1}.
          Calculate:
        i)   The molar conductivity of ethanoic acid at 20°C.   *(2 marks)*

....

....

....

....

....

        ii)   The degree of ionization of the acid at 20°C.   *(1 mark)*

....

....

        iii)   The pH of the acid   *(2 marks)*

....

....

(c) State **two** other factors other than concentration that can affect the pH of the acid. *(2 marks)*

....

....

13.   a)   State **three** properties exhibited by chromium as a transition metal.

(3 marks)

....

....

....

(b)   An aqueous solution of iron(II) salt was added to an acidified solution of chromium in the oxidation state of +6.

   i)   State what was observed.   *(1 mark)*

....

   ii)   Write half equations and the overall equation for the reaction that took place   *(3 ½ marks)*
....

....

....

....

(c)   i)   State **one** application of chromium in the oxidation state of +6 in organic synthesis.   *(½ mark)*

....

   ii)   Write the equation to illustrate your answer.   *(1 mark)*

....

14.   Hydrogen iodide decomposes according to the equation.

$$2 \, HI(g) \rightarrow H_2(g) + I_2(g) \quad \Delta H = +11.3 \text{ kJ/mol.}$$

a)   Write an expression for the equilibrium constant (K_c) of the reaction.   *(½ mark)*

....

12

(b)   2.56 g of hydrogen iodide was heated in a 1000 cm^3 bulb at 500 °C. At equilibrium the bulb was rapidly cooled to room temperature and broken under potassium iodide solution. The iodine liberated required 33.5 cm^3 of 0.2 M sodium thiosulphate for complete reaction. Calculate

i)   The number of moles of hydrogen iodide that were heated.

(1 mark)

....

....

ii)   The number of moles of iodine that were formed from the decomposition.   *(2½ marks)*

....

....

....

....

iii)   The value of K_c for the reaction at 500 °C.   *(3½ marks)*

....

....

....

....

....

(c)   i)   State what would happen to the value of K_c if the temperature changed from 500 °C to 200 °C   *(½ mark)*

....

13

ii)   Explain your answer.   *(1 mark)*

....

....

15.   a)   What is meant by "**hydrolysis of a salt**"?   *(1 mark)*

....

....

(b)   A solution was made by dissolving 2.675 g of ammonium chloride in water to make 1 litre of solution.

   (i)   Write the equation for the hydrolysis of ammonium chloride.
                                                                (1½ marks)

....

   (ii)   Calculate the hydrogen ion concentration and hence the pH of the solution in (b) above   *(5 marks)*
....

....

....

....

....

....

....

ii)   The degree of hydrolysis.
      ($K_w = 1 \times 10^{-14}$ at 25^oC, $K_h = 1.75 \times 10^{-5}$)   *(1½ marks)*

....

....

16. Complete the equation and write an acceptable mechanism
    (a) CH_3CHO + 2,4-dinitrophenylhydrazine in acidic medium   (5.5 marks)

(b) $CH_3CH_2COCH_3$ + $NaHSO_3$ (aq) ⟶ ....

                                                (3.5 marks)

17. A compound Y contains 52.2% carbon, 13.0% hydrogen and the rest oxygen.

  a) Determine the empirical formula of Y.   *(04marks)*

....

....

....

....

....
....
....
....
....
....
....
....
....

b) When vapourised 0.1g of Y occupied 78.8cm^3 at 107°C and 654mmHg.

   (i) Calculate the formula mass of Y.   *(2 ½ marks)*

....
....
....
....

   (ii) Determine the molecular formula of Y.   *(01mark)*

....
....
....
....

   (iii) Write the structural formulae of all possible isomers of Y.   *(01mark)*

....
....
....
....

   (iv) Y does not react with sodium. Identify Y.   *(½ mark)*

....
....
